

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

**Listing of Claims:**

1. (Currently amended) A pressure washer, comprising  
a frame;  
an engine mounted to said frame; and  
a pump coupled to said engine, said pump further comprising:  
a piston assembly including a piston;  
an eccentric assembly suitable for converting rotary motion of a rotating shaft to  
rectilinear motion; and  
a strap for coupling said eccentric assembly and said piston assembly; ~~and~~  
a pulse hose for absorbing pressure pulsation in the liquid induced by pumping; and  
a pressure unloader valve including a valve body having a high pressure port and a low  
pressure port; a ball valve assembly received in the valve body, the ball valve  
assembly including a ball, a ball seat disposed against the high pressure port, a  
spring suitable for biasing the ball against the ball seat; and a plug received in the  
valve body, the plug being threaded into the valve body for controlling the  
amount of bias placed on the ball by the spring,  
wherein said strap is suitable for communicating the rectilinear motion of said eccentric  
assembly to said piston assembly for reciprocating said piston in said cylinder to  
pump said liquid.
2. (Original) The pressure washer as claimed in claim 1, wherein said eccentric  
assembly comprises:  
a shaft suitable for being coupled to a drive shaft of an engine;

at least one bearing assembly for supporting said shaft in said pump housing so that said shaft may rotate; and  
an eccentric for converting the rotary motion of said shaft to rectilinear motion.

3. (Original) The pressure washer as claimed in claim 2, wherein said eccentric assembly further comprises a counterweight assembly coupled to said shaft for counterbalancing movement of said piston assembly.

4. (Original) The pressure washer as claimed in claim 1, wherein said strap is flexible.

5. (Original) The pressure washer as claimed in claim 1, wherein each piston assembly further comprises a strap coupling member and clamping block for coupling said piston assembly to said strap.

6. (Original) The pressure washer as claimed in claim 1, wherein said piston is formed of one of ceramic and nitrated steel.

7. (Original) The pressure washer as claimed in claim 1, further comprising a head assembly for porting said liquid through said pump.

8. (Original) The pressure washer as claimed in claim 1, further comprising a pulse hose retainer for retaining said pulse hose.

9. (Original) The pressure washer as claimed in claim 8, wherein the pulse hose retainer comprises a body having a first aperture and a second aperture, the first aperture being suitable for receiving said pulse hose, and the second aperture being suitable for securing said pulse hose retainer to said frame.

10. (Currently amended) A pressure washer, comprising

a frame assembly,  
an engine mounted to said frame assembly; and  
a pump mounted to said frame assembly and coupled to said engine, said pump further comprising:

a pump assembly having at least one piston assembly, said piston assembly driven by said engine for pumping the liquid from a first pressure to a second pressure;  
a head assembly coupled to said pump assembly, said head assembly including an inlet portion suitable for receiving the liquid at the first pressure and an outlet portion suitable for outputting the liquid at the second pressure; and  
a pressure unloader valve including a valve body having a high pressure port and a low pressure port; a ball valve assembly received in the valve body, the ball valve assembly including a ball, a ball seat disposed against the high pressure port, a spring suitable for biasing the ball against the ball seat; and a plug received in the valve body, the plug being threaded into the valve body for controlling the amount of bias placed on the ball by the spring.

~~a valve assembly disposed in said head assembly, said valve being suitable for opening to circulate~~ wherein said pressure unloader valve opens for circulating the liquid within said head assembly from said inlet portion to said outlet portion as said pump is started and ~~closing to circulate~~ closes for circulating the liquid through said piston assembly once a predetermined rate of flow of the liquid through the pump is achieved.

11. (Original) The pressure washer as claimed in claim 10, wherein said head assembly includes a formed valve body having a port from said inlet portion to said outlet portion.

12. (Original) The pressure washer as claimed in claim 11, wherein said valve assembly includes a ball, a ball seat, and a spring, wherein said ball is held away from said ball seat by said spring as said pump is started opening said port and allowing circulation of the liquid between said inlet portion and said outlet portion, and wherein the liquid forces said ball

against said ball seat overcoming said spring to at least partially block said port once the predetermined flow of the liquid is achieved.

13. (Original) The pressure washer as claimed in claim 12, further comprising a plug for closing said valve body.

14. (Original) The pressure washer as claimed in claim 10, further comprising:  
an eccentric assembly suitable for converting rotary motion of a rotating shaft of the engine to rectilinear motion; and  
a flexible strap for coupling said eccentric assembly and said piston assembly;  
wherein said strap is suitable for communicating the rectilinear motion of said eccentric assembly to said piston assembly for reciprocating said piston to pump said liquid.

15. (Original) The pressure washer as claimed in claim 14, wherein said eccentric assembly comprises:  
a shaft suitable for being coupled to the drive shaft of an engine;  
at least one bearing assembly for supporting said shaft in said pump assembly so that said shaft may rotate; and  
an eccentric for converting the rotary motion of said shaft to rectilinear motion.

16. (Original) The pressure washer as claimed in claim 15, wherein said at least one bearing assembly comprises a sealed bearing.

17. (Original) The pressure washer as claimed in claim 15, wherein said eccentric assembly further comprises a counterweight assembly coupled to said shaft for counterbalancing said piston assembly.

18. (Original) The pressure washer as claimed in claim 14, wherein the strap is shaped so that loads within the strap are distributed substantially uniformly throughout the strap.

19. (Currently amended) A pump for pumping a liquid, comprising  
a pump housing;  
a head assembly coupled to the pump housing,  
a cylinder being formed in the pump housing and head assembly;  
a piston assembly disposed in the cylinder, the piston assembly including a piston capable of  
reciprocating within the cylinder;  
an eccentric assembly suitable for converting rotary motion of a rotating shaft to rectilinear  
motion; and  
a strap for coupling the eccentric assembly and the piston assembly;  
wherein the strap is suitable for communicating the rectilinear motion of the eccentric assembly  
to the piston assembly for reciprocating the piston in the cylinder to pump the liquid.

20. (Original) The pump as claimed in claim 19, wherein the eccentric assembly  
comprises:  
a shaft suitable for being coupled to a drive shaft of an engine;  
at least one bearing assembly for supporting the shaft in the pump housing so that the shaft may  
rotate; and  
an eccentric for converting the rotary motion of the shaft to rectilinear motion.

21. (Original) The pump as claimed in claim 20, wherein the eccentric assembly  
further comprises a counterweight assembly coupled to the shaft for counterbalancing the piston  
assembly.

22. (Original) The pump as claimed in claim 19, wherein the piston assembly further  
comprises a strap coupling assembly for coupling the piston to the strap.

23. (Original) The pump as claimed in claim 19, wherein the head assembly includes  
a port for porting the liquid.

24. (Canceled)

25. (Canceled)

26. (Currently amended) The pump as claimed in claim ~~25~~19, wherein the ball seat includes a restriction portion in which the ball floats for at to at least partially reduce surging of the pump.
